Stanford video: How to use AI

AI: can now have my content, voice, and intent available to me.

→ Tool to augment our creativity

→

Step 1: Don't Ask AI, Let it Ask You

Think to Ask

- You can give AI a prompt
  - → Ex: How should I answer this question?
  - → I want to ask how I should answer this question.
- You can use AI to use AI.
  - -ask ai to ask ai a particular prompt.

→ With AI, you can be like

- Hey! You're an AI expert.
- I would love your help and a consultation w/you. — where I can best leverage AI in my life.
- As an AI expert, ask me one question @ a time until you have the context about my workflows and responsibilities & KPIs and objectives. Make 2 obv recommendat and 2-non obvious recommendations

Pick the tasks you find tedious and incorporate it into your workflow

Step 2: Don't use AI, Treat it like a teammate

The Question is How do you work w/ AI?

→ AI makes people faster etc. (Stat data)

Realization gap

- Outperformers have a different orientation towards AI than underperformers.
- Underperformers treated AI like a tool
- Outperformers treated AI-like a teammate.
  - ↳ Change outcomes of results.

Ex: If AI gives you mediocre results, treat it like a human and give feedback

- Get AI to ask them questions
- Shift their consideration will change the output.
  - → You could say the goal is to make you think.

Functional fixedness (Einstellung effect)

- Humans tend to fixate on the early solution and be satisfied.
  - ↳ We need to get passed this
  - → In need of the Growth-mindset

Most effective way of prompt engineering

1.) Be specific

- Example:

Tell me about the different type of dog-breeds.

or

What are the different breeds of small dogs suitable for apartment living.

2.) State your intent

Example

I'm helping my fifth grade son w/ his science Could you explain quantum physics in a simple manner? Keep it short

3.) Use correct spelling & grammar

Correcting grammar/spelling can help it to understand what you want.

4.) Select the output format

Example

- Can you explain the steps of baking a cake?
- Can you explain it in a paragraph.

5.) Ask follow-up questions

b.) Experiment w/ different phrasing

7.) Prompt for fact-checking

Example:

Can you fact-check my output

Formula = Getting better results

[Context] + [Specific information] + [intent] +

[Response format] = Perfect Prompt

Ex: I am a beginner cook. I am trying to make italian cuisine. Can you provide me a simple and easy to follow recipe. The format that I want is a numbered list from 1-10.

(Context; specific info; intent)

ex2: I am a software developer. (context)
I am working on a python project. (spec info)
Can you explain how to implement exception handling in python. (intent)
Tell me in a simple paragraph (response format)
