The future of Excel Automation

mb can be used for something else not / FINC STMTS

Power Query: Relatively new

What makes PQ feel modern?

- Dynamic by fault
- User friendly (Step by Step interface / modify M-code)
- Do complex things w/o programming.
- You can refresh reports w/one-click every time the data updates.

sadly this will not work

Why many firms are now Adopting it?

- VBA has been around for decades / familiar
- PQ = more of a data prep tool NOT Formatting tool
- People are just now realizing how much manual work Power Query can eliminate (esp in accounting, finance, reporting)

Can Power Query Help w/ Profit & Loss Excel File?

Task	Can Power Query help?
Automatically find the last row	yes, it's dynamic
Filter or remove subtotal / total rows	yes, filter by text, font, logic
remove blank rows or columns	yes
convert exported reports into clean tables	yes, great for this
calculate cost per sq ft or % of income	yes, add column calc
Handle both short and long reports	yes, handles changing row counts dynamically
Preserve formatting	no
output into a clean table	yes
